YTL Hackathon 2026 · Enterprise Track A · all data synthetic

Platform Partner unstop

The problem, in the data

Only 368 of 5,000 leads activated in a quarter

% = conversion from the previous stage. Steepest drop: needs assessed → quote.

7.4%
lead → activation

17.6 days
lead → activation

₹15,053
acquisition cost per activation

3.0
status calls per customer

GSTIN leads activate at 9.6% vs 2.0% without
so the journey checks GSTIN early and helps owners without one

≈ 1,583 drops are journey-fixable: owner had no time for a visit 531 · visit not scheduled 296 · quote too complex 206 · quote took too long 179 · install delayed > 21 days 98 · missing GST/Udyam 94 · paperwork too long 79 · signatory 53 · details mismatch 47
+ 1,124 unreachable (805 after 3 attempts, 319 wrong number) **that a self-serve link can reach.**

Target segments and their bundles

Lead with professional offices; win micro retail on volume

Segment	Share of leads	Activation	Median bundle / month	6-mo churn	Starter bundle (from the catalogue)	Route
Professional offices	25%	11.1%	₹6,575	14%	Biz Fibre 300 + failover, postpaid 599, cloud email, backup, endpoint security	Digital first
Micro retail	54%	4.1%	₹2,470	23%	Biz Fibre 100 or 5G AirFiber, postpaid 299, Cloud POS, secure Wi-Fi, WhatsApp	Self-serve + partners
Multi-site	15%	11.0%	₹28,080	11%	Fibre per site, managed SD-WAN, failover, managed firewall, cloud CCTV	Field-assisted
Manufacturers	6%	12.8%	₹15,910	8%	Internet leased line, static IP, managed firewall, machine-monitoring IoT	Field-assisted

Why professional offices first

Highest value per effort: 11.1% activation at ₹6,575 a month, medium price sensitivity, and already used to digital tools (clinics, CA firms, coaching centres).

Micro retail is the volume play

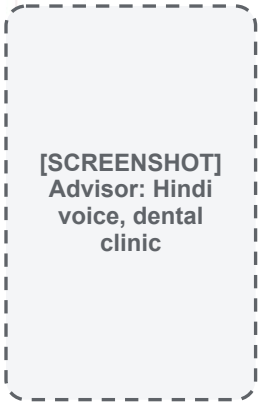

54% of leads, but 4.1% activation and 23% churn. Reach them at low cost through self-serve links and partners, not field visits.

Source: smb_leads.csv (synthetic), 5,000 leads, Apr–Jun 2026. Bundles are the engine's starting point; the advisor adjusts them to each business.

The journey: one sitting, on a phone

Each step removes a reason owners drop out today

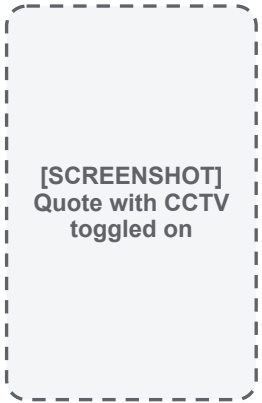

1 Ask

Advisor chat or voice, EN/HI. Asks only what's missing.

Fixes: no time for a visit · visit not scheduled

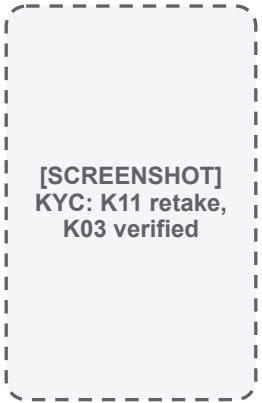

2 Quote

One monthly price with GST, reasons per item, add-on toggles.

Fixes: quote too complex · took too long

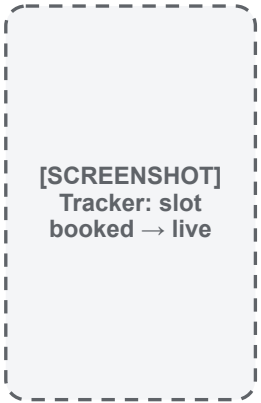

3 Smart KYC

Per-purpose consent, photo checks, GSTIN/Udyam lookup, retake hints.

Fixes: paperwork · missing / mismatched documents

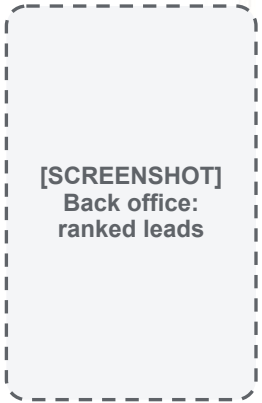

4 Track

Order ID + PIN, self-booked install slot, ETA per item.

Fixes: status calls · install delays

5 Back office

Leads the advisor couldn't close, scored and routed.

Fixes: unreachable · wrong number

Screenshots are placeholders until integration. Drop reasons are from smb_leads.csv (synthetic).

How the advisor stays safe: rules decide, the LLM talks

Owner
speaks or types about the business, in Hindi or English

→

LLM
pulls out profile fields and writes the reply. It sees the business description only

→

Rules engine
checks eligibility (city tier, size, GSTIN, dependencies) and sets the price from the catalogue

→

LLM
explains the engine's quote in plain words. It can't add a product or change a price

Deterministic core. Products, eligibility, dependencies and prices come from the catalogue rules; ineligible items are shown with the reason (tier, size, GSTIN, dependency).

Fallback chain. Groq → Gemini → rules-only mode. If both LLMs time out, the owner still gets a quote, and the screen shows which mode answered.

Privacy by design. The LLM never receives IDs, phone numbers, documents or images.

Human handoff. If the owner asks for a person, or the advisor can't help, it hands off to the back office with the conversation so far.

Tested offline. Scripted advisor scenarios run against the rules mode, and unit tests never call a real LLM.

Smart KYC, built for the DPDP Act

Near-instant checks, with consent and data minimisation

Consent
per purpose, versioned, EN/HI

4 photos
GST cert, Udyam cert, signatory ID, address proof

Read in memory
RapidOCR, blur and skew checks, never stored

Cross-check
GSTIN checksum + registry status, Udyam match, names, bill ≤ 90 days

Verdict
verified · action required (retake one photo) · manual review · rejected

DPDP choices

Consent per purpose: required KYC check plus an optional purpose; withdrawing consent deletes the KYC data

Minimisation: each step asks only what it needs; Aadhaar is never collected

No document storage: photos are read in memory, and only checks and masked fields are kept

Retention: 180 days after activation, 30 days if rejected

Masking: GSTIN, Udyam, ID and phone are masked in the UI and logs; phone is encrypted at rest

Production adds: DigiLocker pull, Aadhaar e-sign, audit log, role-based access

Targets today's drops: missing GST/Udyam 94, paperwork too long 79, signatory not available 53, details did not match 47

Sample applicants K01–K12 are synthetic specimen documents from the case pack.

Field force and partners: digital adds, not replaces

Every lead gets a propensity score and a suggested channel

FIELD

Multi-site, manufacturers, and bundles ≥ ₹10k a month

Reps spend visits where the value is: 11.0% and 12.8% activation, ₹28,080 and ₹15,910 median bundles.

PARTNER

Tier-2 cities, regional-language owners, micro businesses

Local partners run the same app in assisted mode and earn a commission on each assisted sale.

SELF_SERVE_LINK

Unreachable or wrong-number leads

An SMS or WhatsApp link lets 1,124 hard-to-reach leads start alone, at any hour.

Lead source	Activation	Cost per lead
Referral	14.8%	₹605
Inbound call	9.5%	₹487
Channel partner	8.0%	₹1,672
Field sales	7.3%	₹1,769
Website form	4.3%	₹274
WhatsApp campaign	2.8%	₹112

How it works

The back office ranks open leads with a lead score (HOT/WARM/COLD) and its top two factors.

Inside sales takes the remaining warm leads. Advisor handoffs and KYC manual reviews land in the same queue.

Assisted-sale commissions keep partners selling with the journey, not against it. The rate gets set in the pilot.

Metrics and targets

Targets are assumptions to be proven in the pilot, not results

Metric	Baseline (data)	Target	What moves it
Lead → activation	7.4%	12%	Advisor, instant quote, self-serve link, lead routing
Time to activate	17.6 days	≤ 7 days	Same-sitting quote + KYC, self-booked install slot
Acquisition cost per activation	₹15,053	≤ ₹8,000	Fewer visits; field reps go where value is highest
Status calls per customer	3.0	≤ 0.5	Tracker with order ID + PIN and per-item ETAs
6-month churn	~15%	≤ 10%	Eligibility rules: only bundles that fit the business

Measured per cohort (pilot city × channel × segment) from the timestamps the order timeline already records: quote, consent, KYC verdict, slot booked, live. Pilot cities are compared with matched non-pilot cities. Churn reads at 6 months, so the 8-week proxy is "live within the promised slot + first bill paid".

Source: smb_leads.csv (synthetic), 5,000 leads, Apr–Jun 2026. Targets are proposed, not measured.

Rollout and risks

8-week pilot: 2 tier-1 + 2 tier-2 cities

Weeks 1–2
Set up

Delhi, Mumbai (tier 1) + Indore, Lucknow (tier 2, Hindi-first). Train partners; connect the catalogue and registries.

Weeks 3–6
Run

Professional offices digital-first; micro retail through links and partners; field takes multi-site and manufacturers.

Weeks 7–8
Read out

Compare with matched cities on the 5 metrics. Go/no-go and a regional-language plan.

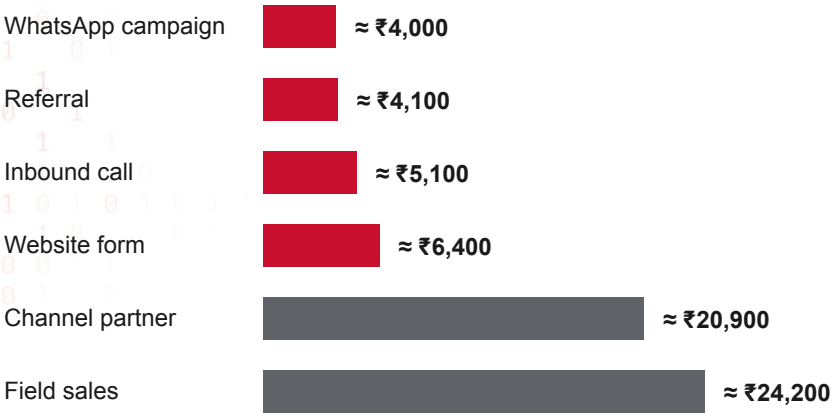

Risk	Mitigation
LLM gives a wrong or unsafe answer	Rules engine decides products and prices; rules-only fallback; human handoff
OCR misreads a document	Quality checks, one-photo retake hints, manual-review queue
Field and partners see it as a threat	Routing sends them high-value leads; commission on assisted sales
Personal data exposure (DPDP)	Consent per purpose, no stored images, masking, encrypted phone, retention limits
Installs can't keep the promised date	Slots only from available capacity; per-item ETAs; delays shown, not hidden
Micro owners don't finish alone	Partner-assisted mode; save and resume from the self-serve link

Pilot cities are a proposal. Lead volumes per city are in smb_leads.csv (synthetic).

Economics

Projections are illustrative assumptions, not results

Lead cost per activation, by source (derived)

Cost per lead ÷ activation rate, so lead cost only. Use it to compare sources, not as a full acquisition cost (blended: ₹15,053).

Months of bundle revenue to recover acquisition cost	At ₹15,053	At ≤ ₹8,000
Professional offices (₹6,575 / mo)	~2.3	~1.2
Micro retail (₹2,470 / mo)	~6.1	~3.2

If the targets hold (assumption)

- **~600 activations** a quarter instead of 368, from the same 5,000 leads at 12%
- **~₹7,000 saved** per activation (₹15,053 → ≤ ₹8,000)
- **~1,100 → ~300 status calls** a quarter, even with more customers
- **Lower churn** from bundles that fit (target ≤ 10%)

Revenue, not margin. Payback uses median monthly bundle values. Partner commission rates and install costs aren't in the data, so the pilot measures them.
